

A close-up photograph of a dark fabric, possibly a textile or carpet, featuring a repeating grid pattern of small, light-colored squares. The pattern is dense and covers the entire visible area. The lighting is slightly uneven, with a brighter vertical band running down the center, highlighting the texture of the material.

Texaa®

New colours

April 2020

A fabric for architecture

Aeria is a Texaa hallmark: it is the fabric that covers all its products.

It is knitted using a patented process and is sound-transparent, run resistant and extremely fire resistant.

It decorates and protects mainly acoustic technical systems that are to be positioned within volumes to ensure architectural functions.

It is available in two knit sizes and a new range of 30 colours available from April 2020.

Christine Bernos is an architect and colourist.
In collaboration with the **Texaa**® team,
she has invented the **Aeria** range of colours since 2005.

The new colour range may be ordered
from 1st April 2020.

Maille Ronde

All colours are available for our Stereo, Vibrasto, Strato, Blinds and Curtains solutions.
Special colour schemes are available on request.
The colours applicable to our Abso accessories are marked with an (A).

The final appearance of any colour of our Aeria fabric is partially influenced by the base to which it is applied.
The presentations below display Stereo and Vibrasto applications. The base materials used for our Abso accessories, Blinds and Curtains are different. Please consult us if you are mixing different families of products.
